

SMART PRODUCTS
FOR ENDO LOVERS

EssenSeal®

Tea Tree  Thymol  Eugenol 
Root Canal Sealer

The flow test evaluates the cement's fluidity, ensuring it spreads effectively within the root canal, fully penetrating and adapting to the intricate root canal anatomy.

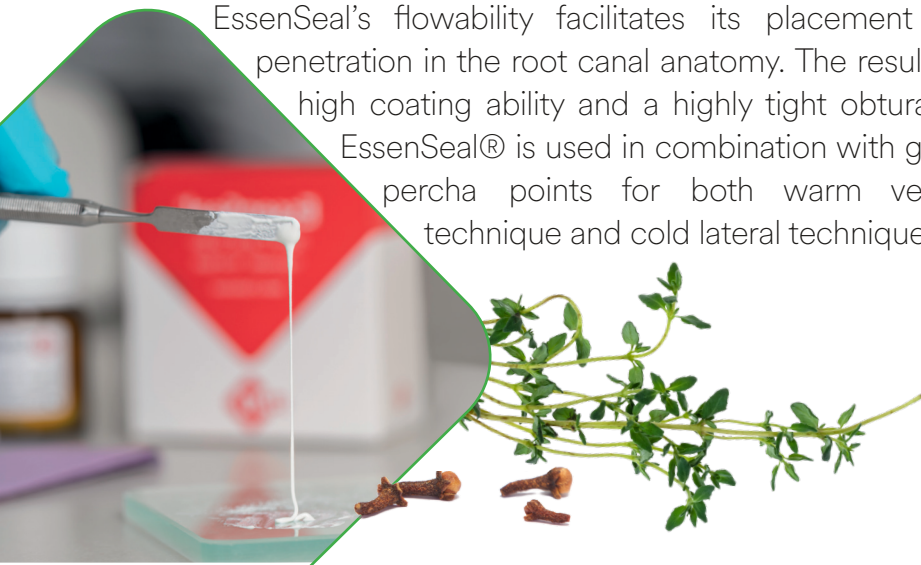

Internal test realized by Produits Dentaires SA

— ISO 6876 requirements (>17mm)

EssenSeal® provides excellent anatomical adaptation thanks to the combination of its thixotropic properties, small particle size, and the consistency induced by essential oils. Accordingly, EssenSeal's flowability facilitates its placement and penetration in the root canal anatomy. The result is a high coating ability and a highly tight obturation.

EssenSeal® is used in combination with gutta-percha points for both warm vertical technique and cold lateral technique.

Highly radio-opaque

For precise follow-up • 6mm Al according to ISO 6876

Creamy and smooth consistency

Thanks to fine particles granulometry • The predominant particle size is measured at 7 μ m by laser granulometry.

Optimized clinical workflow

Working time 60 minutes and setting time lower than 3 hours.

Three-dimensional and tight sealing

with gutta percha points
