PFAS absence declaration

Per-and polyfluoroalkyl substances (PFASs) are synthetic organofluorine chemical compounds that have multiple fluorine atoms attached to an alkyl chain. Many PFASs were used in the mid-20th century as products or precursors for materials due to their enhanced water-resistant properties.

ProfiMed does not intentionally add any PFAS to its dental floss, nor our suppliers do. We do not use materials containing PFAS, because they could impair the absorption of our ingredients (wax, aromas and other treatments).

We also tested our products vs the accidental presence of PFAS and the results are all negatives.

Best regards

Brugherio, November 3, 2022
